

Company Profile

VoiceIP Solutions is a network telephony integrator, specializing in Asterisk Telephony Platform integration. VoiceIP Solutions provides a full range of IT services including, network analysis, network design, systems integration, value added reseller (VAR) services, end-user support, and onsite training. We provide a one-stop-shop for your company's telephony and data networking needs.

VoiceIP Solutions is staffed with certified networking professionals who will analyze your networking and telephony needs to create a customized communications plan to meet your company's goals.

VoiceIP Solutions provides turnkey PBX solutions based on the Asterisk Telephony Platform, an OpenSource iPBX telephone system that runs on the Linux operating system. By leveraging the power of OpenSource software we are able to provide our clients with feature rich systems at a fraction of the cost of our proprietary competitors. Our vendor neutral approach to systems integration allows us to create custom solutions that fit best with our customers individual business needs and budget. Your company will not be locked into using a single vendor's hardware, and be forced to pay exurbanite upgrade costs as your needs change. VoiceIP Solutions can also provide integration with existing equipment to leverage the costs of your infrastructure investments.

By leveraging a national network of IT support firms; VoiceIP Solutions is able to extend support services to remote client sites around the country. This provides our clients a single point of contact for telephony and network services, regardless of the locations of remote offices. Remote systems administration, built into every VoiceIP Solutions Telephony Server, allows many service calls to be avoided, decreasing support costs.

VoiceIP Solutions provides an array of programming services, allowing us to develop a variety of custom voice applications for clients. Due to the extendibility of the Asterisk Telephony Platform, solutions can grow and evolve to meet the changing needs of your business.
